Project Goal
• Reduce frequency and severity of flooding in the Town Center and Sheridan Beach Neighborhood.

Funding
• FEMA - $3 million
• King County Flood Control District - $1.05 million
• WSDOT (pending) - $1.8 million
• City - $320 thousand

The modified project scope will enhance aquatic habitat in the existing stream — including removal of fish passage barriers — in addition to meeting the project’s flood mitigation objectives.

Original Project Scope
• Divert peak flows through a 60-inch diameter high-flow bypass pipe.

Modified Project Scope
• Stream and culvert improvements along existing stream alignment, including upsizing existing culverts and enhancement of the stream reach and public access areas.
